VEGF-3 REMAINS CELL-SURFACE ASSOCIATED UNDESSOR VEGF-3 ARE HEPARIN.

HEPARIN.

ALTERNATIVE PRODUCTS: THREE FORMS (VEGF-1, VEGF-2 AND VEGF-3) ARE PRODUCED AS A RESULT OF ALTERNATIVE SPLICING OF THE SAME GENE. TH LONGEST FORM (VEGF-3, SHOWN HERE) CONTAINS A BASIC INSERT LINKED TO CELL-ASSOCIATION/HEPARIN-BINDING.

TISSUE SPECIFICITY: IN DEVELOPING EMBRYOS, EXPRESSED MAINLY IN THE CHOROID PLEXUS, PARAVENTRICULAR NEUROEDITHELIUM, PLACENTA AND KIDNEY GLOMERULI. ALSO FOUND IN BRONCHIAL EPITHELIUM, ADRENAL GLAND AND IN SEMINIFEROUS TUBULES OF TESTIS. HIGH EXPRESSION OF VEGF CONTINUES IN KIDNEY GLOMERULI AND CHOROID PLEXUS IN ADULTS.

VEGF CONTINUES IN KIDNEY GLOMERULI AND CHOROID PLEXUS IN ADULTS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 N

PERMEABILITY.

SUBUNIT: HOMODIMER, DISULFIDE-LINKED (BY SIMILARITY).

ALTERNATIVE PRODUCTS: THREE ISOFORMS (VEGF-190, VEGF-146 AND VEGF-166) ARE PRODUCED AS A RESULT OF ALTERNATIVE SPLICING OF THE SEND.

THE LONGER FORM CONTAINS A BASIC INSERT WHICH ACTS AS A RETENTION SIGNAL.

TISSUE SPECIFICITY: ABUNDANTLY AND EQUALLY EXPRESSED IN HEART LIVER. IN KIDNEY GLOMEBULI, BRAIN AND YOLK SAC, VEGF-166 FORM.

TO 10- TIMES MORE ABUNDANT THAN THE VEGF-190 FORM.

TO 10- TIMES MORE ABUNDANT THAN THE VEGF-190 FORM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "Vascular endothelial growth factor (VEGF) and VEGF receptor (flk-1) are expressed during vasculogenesis and vascular differentiation in the quail embryo.";
